

DeepGraph Enterprise pricing guide

DeepGraph turns Git history into clear reports about contributors, activity, commits, and code changes across projects. It supports GitHub, GitLab.com, Bitbucket.org, and local Git repositories.

Enterprise pricing

Enterprise is priced by individual quote. There is no fixed public Enterprise price. Contact support@deepgraph.app or use [Contact support](#) to discuss your needs and request a written quote before purchasing.

The quote confirms the price and the agreed scope, including:

- Project count and total Git history capacity.
- Hosted deployment or running DeepGraph on your own servers.
- Support arrangements, including the advertised 24/7 priority support option.
- Features tailored to your team and their delivery scope.

Custom capacity and services are agreed in the quote; Enterprise is not an unlimited plan. Specific response times and delivery dates must be agreed in writing.

Standard plans and trial

Core is €35 per month for up to 25 projects and 5 GB of Git history in total. Scale is €99 per month for up to 100 projects and 25 GB of Git history in total. Limits apply across an account, whichever is reached first.

New accounts can try Core free for 14 days without payment details. Scale requires a paid subscription; there is no Scale trial. The trial does not automatically become a paid subscription.

Billing, cancellation, and refunds

Prices are in euros and include VAT where applicable. Purchased subscriptions are billed monthly in advance and renew automatically until cancelled. Cancel in Settings → Billing to stop the next renewal; access continues until the end of the paid period. A full refund is available within 14 days of any payment, no questions asked.

See [Pricing](#), [Terms of Service](#), and the [Refund Policy](#) for the published terms.

Operator and contact

DeepGraph is operated by A.I. Victor Chicu, IDNO 1026023023591, Bulevardul Moscova 9/5, Chişinău, Republic of Moldova.
